

Electrical Safety

This Electrical Safety training course is designed to ensure that both employers and employees understand the main risks and the necessary controls for the safe use of electricity at work. Wherever people are working, there are risks to the users of electrical installations and equipment that must be considered.

This course will help you understand how to complete an electrical risk assessment, how to review existing control measures, and how to ensure that appropriate safe systems of work are put in place to keep workers from harm when their work activities involve electrical equipment or electrical installations.

COURSE CONTENTS

The course covers the following four elements:

- Unit 1 – Introduction to electrical safety
- Unit 2 – Risk Assessments
- Unit 3 – Controlling Hazards
- Unit 4 – Working safely with electrical equipment

WHAT RESULTS CAN I EXPECT?

By the end of this course learners will:

- Understand why training in electrical safety is essential for maintaining health and safety.
- Have knowledge of their employer's, and their own, responsibilities under electrical safety legislation.
- Understand what is involved in carrying out a risk assessment of the workplace.
- Understand the importance of maintaining and inspecting electrical equipment.
- Have knowledge of the controls that can be used to help make working with electricity safer.
- Understand the best practices when working with electricity, including overhead power lines, underground cables and indoor work near to a source of electricity.

WHO SHOULD TAKE THIS COURSE?

This course is suitable for workers of all levels, including employers, managers, supervisors, and employees whose work activities involve the use of electrical equipment or close-contact with electrical installations. The course has been designed as an introduction to electrical safety and so no pre-requisite training is needed.
