

Spill Kit Training: Chemicals & Oils

This Spill Management Training course shows how to safely store, use and transport dangerous substances in order to minimise the risk of a spill. It also explains the most effective methods of spill response in the workplace and how to effectively use a Spill Kit.

This course outlines the responsibilities that employers have if their workplace and work activities involve using dangerous substances in quantities above COMAH threshold limits.

COURSE CONTENTS

The course covers the following four elements:

- Introduction to Spill Prevention
- Hazardous Substances
- Planning for a Spill
- Managing a Spill

SHAPING THE WAY BUSINESSES OPERATE

WHAT RESULTS CAN I EXPECT?

By the end of this course learners will:

- Understand what is meant by a hazardous substance.
- Understand the legislation surrounding pollution prevention in the UK.
- Know how to identify hazardous substances on site and what information you can find on the Safety Data Sheet.
- Be aware of the different safety methods and spill prevention techniques available to prevent and control the spillage of hazardous substances.
- Understand what needs to be included in an on- and off-site emergency procedure and when you are legally required to have one under COMAH.

WHO SHOULD TAKE THIS COURSE?

This Spill Management Training course is aimed at employees who work in industries where they are required to use, store or transport hazardous substances, such as solvents, pesticides and fuel. The course is also beneficial for employers in these sectors. It outlines their duties and how to install controls to protect people, animals and the environment from the consequences of a spill.
